Summary

I'm a dedicated Computer Science Engineering student at Kalinga institute of University with a strong academic record. Proficient in programming and experienced in Windows and UNIX/Linux, I'm passionate about cyber-security trends, often exploring them through documentaries and podcasts. My interpersonal skills, effective communication, and problem solving abilities, combined with multitasking proficiency, make me a valuable team member. Eager to contribute my knowledge and enthusiasm to the tech and cyber-security landscape

Skills

- Analytical thinking & problem solving
- Team collaboration (worked with analysts & managers in internship)
- Business communication (client handling via Kings Agency)
- Time management (balancing studies, internship, and freelancing)

Experience

I founded **Kings Agency** during my 1st year of college to explore entrepreneurship and understand how real businesses operate. What started as a small experiment turned into a learning ground where I worked with local businesses, hotels, gyms, and cafes, delivering solutions in **branding, design, automation, and client analytics**. Through this journey, I learned how to collaborate with clients, manage projects, and apply data-driven strategies in real-world scenarios.

Currently, I am also working on my **dream projects – CAB and PIZRA** – which aim to combine **technology, automation, and data insights** to create innovative solutions for modern businesses. These projects represent my vision of building impactful products from the ground up.

Projects

1) Ruden Fitness Platform | React, Vite, Tailwind, Vercel

Developed a modern fitness coaching platform designed to showcase elite personal training services and programs.

Created a responsive UI with smooth animations and optimized performance for a seamless user experience.

Integrated structured content sections including services, blog system, contact forms, and client onboarding workflows.

Improved digital presence for the brand by building a scalable and visually engaging website.

2) Rajnish Youth Leadership Platform | React, Vite, Tailwind, Vercel

Built a dynamic website platform focused on youth leadership engagement and digital community presence.

Designed a responsive interface with structured sections for initiatives, leadership programs, and user engagement.

Implemented modern UI/UX practices and optimized performance for accessibility across devices.

Enhanced the organization's online presence through a scalable and interactive web platform.

3)Library Management Bot | Telegram API, Python

- Developed a simple **Telegram Bot** for managing a small library system.
- Automated book search, borrow/return requests, and availability checks.
- Improved accessibility for students by providing a fast and user-friendly interface within Telegram.

4)College Notes Sharing Bot | Telegram API, Python

- Built a bot to help students **share and access study notes easily**.
- Enabled categorized storage (subjects/semesters) and quick retrieval.
- Reduced manual effort in exchanging notes and improved resource-sharing among peers.

5)Business Growth Strategies | Kings Agency

- Assisted multiple local businesses (restaurants, gyms, hotels, eCommerce) in **boosting sales and engagement**.
- Applied **creative strategies, automation workflows, and data-driven insights** to improve lead generation and customer retention.
- Helped businesses achieve measurable improvements in **branding, sales, and digital presence**.

Awards & Certifications

🏅 **Google Summer of Code (GSoC) Contributor Badge – 2024**
Recognized for contributions to open-source projects during **Google Summer of Code 2024**.

🔐 **Cybersecurity Analyst Job Simulation – 2024**
Completed a hands-on simulation focusing on **threat analysis, incident response, and vulnerability assessment**.

Education

B.Tech in Computer Science & Engineering *(Pursuing)*

Kalinga Institute of Industrial Technology (KIIT University), Bhubaneswar

Current CGPA: 7.6 / ***10*** *| Expected Graduation:* ***2027***
